

Rocky Mountain Blazing Star

Liatris ligulistylis

Plant Height: 24 inches

Flower Height: 3 feet

Spread: 24 inches

Sunlight: ☉

Hardiness Zone: 3a

Other Names: Meadow Blazing Star, Gayfeather

Description:

An upright clump-forming plant that features towering flower spikes from mid-summer to fall; visually spectacular when massed together along a border or as a garden accent; easy to grow, hardy and disease resistant

Ornamental Features

Rocky Mountain Blazing Star has masses of beautiful spikes of violet flowers with rose overtones and dark red eyes rising above the foliage from mid summer to mid fall, which emerge from distinctive red flower buds, and which are most effective when planted in groupings. The flowers are excellent for cutting. Its narrow leaves are green in color. The foliage often turns coppery-bronze in fall.

Landscape Attributes

Rocky Mountain Blazing Star is an herbaceous perennial with a rigidly upright and towering form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees, butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Self-Seeding

Rocky Mountain Blazing Star is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Naturalizing And Woodland Gardens

Planting & Growing

Rocky Mountain Blazing Star will grow to be about 24 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 24 inches. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is native to parts of North America. It can be propagated by division.
